12. Technical Items

(1)、Don't take off the rubber plugs before using and installing compressor to prevent dust and moisture.

(2)、Don't turn down or incline the compressor during storage, transportation or installation and avoid vibration and shock.

- (3)、The compressor must be kept horizontally during running, the inclination angle must be less than 5° .
- (4)、The interval of compressor operation must be more than 4 minutes in order to obtain a pressure balance in the systems.
- (5)、Don't start or run in the case of vacuum or charge high voltage in the compressor. The compressor cannot be used to vacuumize the refrigeration system.
- (6)、The design of refrigeration system must be suitable to insure the oil could flow back to compressor.
- (7)、The maximum ambient temperature of the compressor operation is 43℃.When continuously operating under the maximum ambient temperature 43℃ , the condensing pressure and the peak pressure should not exceed as showing in the following table.

Refrigerant	R290
Max. condensing pressure	2.01MPa
Peak	2.44MPa

- (8)、Widen the evaporating Temp. range of the compressor should be approved by DONPER.
- (9)、Compressor should be stored in a dry place.
- (10)、Compressor accessories (eg: starting relay, overload protector etc.) are put in the accessories box instead of fixing on the compressor.
- (11)、The stocking period must be less than 6 months after the date of production. If longer, you have to check whether the filled gas is sufficient. Replenishment must be done if necessary.
- (12)、It's necessary to keep the compressor without rubber plug as short time as possible (max time 10 min).
- (13)、R290 systems require a filter with drying agent with suitable for R290 refrigerant
- (14)、The vacuum pump and the charging system must only be dedicated to R290.
- (15)、The refrigeration system should minimize the content of chlorion and moisture, and must be free of paraffin and silicon oil.
- (16)、The organic substance non-compatible with R290 cannot be used in the refrigeration system.
